**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1, 2, 4-7, 9 & 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. As noted in the Advisory Action, “high-speed instruction” and “low-speed instruction” are open to multiple interpretations. Examiner assumes that the terms should be considered the equivalent of “fast-forward” and “slow-motion” respectively.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1, 2, 4-7, 9 & 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deering (US Patent Number 6,313,838).

**Claims 1 & 7:** Deering teaches forming a plurality of frame images constituting the video game sequentially and displaying the plurality of formed frame images by switching the frame images from a frame buffer. Deering teaches predicting formation time periods of said plurality of frame images when said frame images are individually formed. (Col 3, 53-60) Deering teaches determining game progress to be made by said

frame images, in dependence upon the formation time periods of said frame images, as predicted. Deering teaches a constant frame rate. Therefore, the game progress is dependent on the amount of time that it takes to form the image (i.e., the frame rate). Deering teaches use of the system in video games. Video games inherently include changing said determined game progress (i.e., character movement rates or direction) in response to an operation input by a player.

The choice of rate of tempo of game music, rate of formation of frame images & determined game progress depending on the command issued in a video game is a matter of design choice that is well within the level of ordinary skill in the art.

**Claims 2 & 7:** The predicted formation time periods of said plurality of frame images are expressed in units of a frame image display period of a shortest period of switching display of said frame images – i.e., the frame rate.

**Claims 4, 5, 9 & 10:** Examiner considers the predetermined clock signal of claims 4, 5, 9 & 10 to refer to the video synchronization signals that are inherent in video monitors.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Slye et al. (US Patent Number 5,261,820) and Asai et al. (US Patent Number 5,779,548) both teach video games with fast-forward & slow-motion commands.
